

Not only the large international airports rely on the Focus electronic flight strip system from Delair Air Traffic Systems, but also smaller and medium-sized regional airports are changing to the modern solution. Braunschweig-Wolfsburg Airport in Germany treads a path which will be followed by further regional airports in the near future. Delair's Focus SE product is particularly tailored to the needs of smaller and medium-sized airports. Specific attention is directed to a simple and intuitive workflow which enables the user to gather all flight movements. "It is extremely important for us as a regional airport that we avoid double work and thus eliminate possible causes for error. In Delair we have found a partner who provides a solution customized exactly to both our requirements and our budget," said Boris Gelfert, Braunschweig-Wolfsburg Airport's Managing Director. #897.ATC4
