No. 880

ATC

The strategic version of the Delair Air traffic Systems Sally resource manager has been operating at Vienna Airport for pre-planning tasks since 2009. Recently, the tactical version also successfully started operations. The users are very satisfied with the high flexibility of the system and the extremely powerful and fast planning algorithm. Before Sally was introduced, planning was a laborious task which took hours of manual planning and refinement. Now planning for the next day is done with just a few mouse clicks in seconds. Now all the users' information from years of operation is stored in a very flexible set of rules. Based on this rule set Sally provides permanent support and control, and users are notified of every breach of the rule set and alternative planning proposals are offered.
